

VIRTUAL INTENSIVE CARE UNIT

by Virtual Lab, s.r.o.

PRODUCT DESCRIPTION:

Training application in virtual reality. Its main purpose is a quick and effective training of medical staff to manage difficult situations and operate devices at intensive care units. With the application, critical situations can be simulated, and thus the trained medical staff will gain experience and confidence. All this takes place in a safe environment without endangering the patient's life. Most experts agree that a pandemic situation with COVID-19 or a similar disease may recur in the near- and medium-term future. Thanks to this application, hospitals can train enough professional staff to serve patients at intensive care units.

COMPANY PROFILE:

Virtual Lab focuses on the use of virtual reality to help people in industry, education, social services and other areas of life. In its software development, the company focuses on applications that teach users new skills through a powerful experience.

-  available by September 2020
-  Windows and Android compatible
-  helps deal with shortages of trained healthcare staff at intensive care units
